Your Cloud IT department

Cloud Managed Services

MIGRATE

While there are many benefits to moving to the cloud, each case is different and there must be careful planning to ensure success. That's where our experience comes in. With over 15 years managing and migrating complex infrastructure you can be sure your migration is in very good hands.

DEPLOY

CTS will help design, architect, test, and deploy your complex application infrastructure for high-availability, scalability, performance, or compliance and security. Our DevOps engineers will work closely with your dev team to automate your entire cloud infrastructure. From server provisioning and configuration management, to application deployment and continuous integration, CTS uses the latest technologies, tools, and methodologies.

MONITOR

Get 24x7 Monitoring of all aspects of your server. We use a combination of proprietary and 3rd party tools performing. Our industry-leading SLAs ensure a timely response.

OPTIMIZE

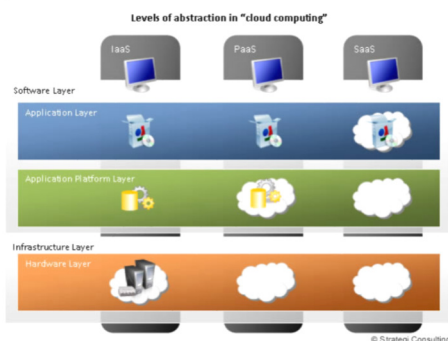

Taking it a step further, our DevOps engineers will proactively assess the health of your application and make ongoing recommendations on how to improve performance within your budget. We will also optimize your AWS spend using reserved instances, instance right-sizing, and manual intervention to ensure you are getting the maximum performance for your budget.

AUTOMATE

Engineers will proactively look for automating applications, scripting develop programs for your budget. We can manage your SQL, Oracle or MySQL database.
